

DENTAL SUCTION **BLOCK**

Suction and Mouth Opening in one device.

Model : Dentozone 99 Suction Block

FEATURES

- **Automatic Suction Function**

Previously, an assistant had to hold the suction, but with the 99 Suction Block's automatic suction function, the practitioner can keep one hand free. This enables efficient solo treatment and helps address staff shortages.

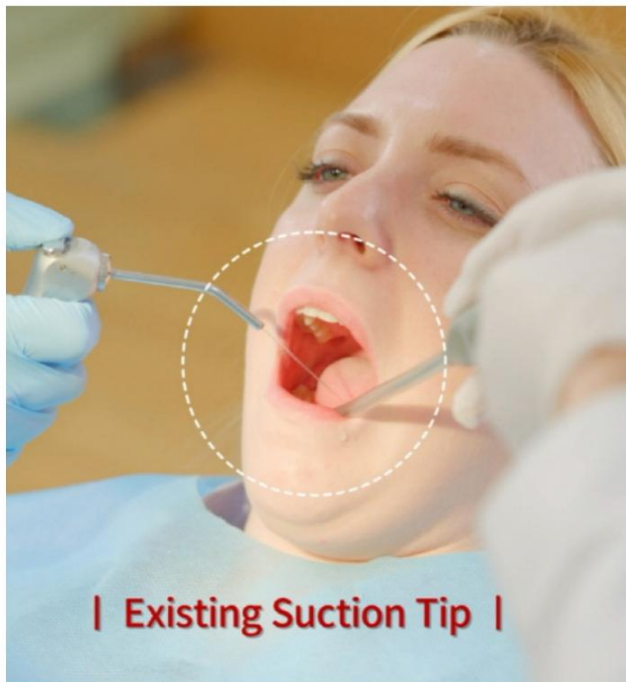

- **Mouth Opening Function**

The 99 Suction Block holds the patient's mouth open at an optimal angle, allowing for stable treatment without the need for an assistant. It provides comfortable mouth opening support without straining the jaw or teeth, even during extended procedures.

- **Reducing Patient Discomfort**

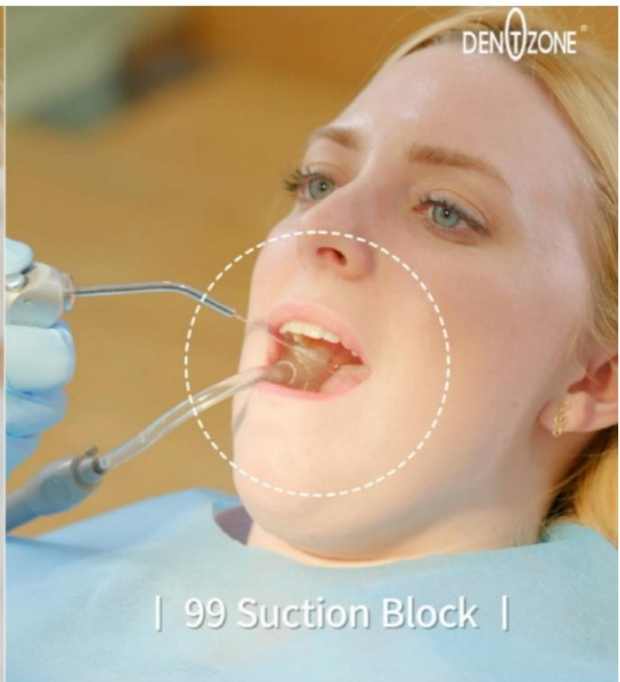

During Treatment, saliva and fluids can accumulate, making it difficult for patients to swallow and causing discomfort. The 99 Suction Block continuously removes excess moistures, minimizing irritation and enhancing patient comfort for a more pleasant treatment experience.

Before / Conventional Method

| Existing Suction Tip |

After / Using 99 Suction Block

| 99 Suction Block |

Conventional Suction Tip

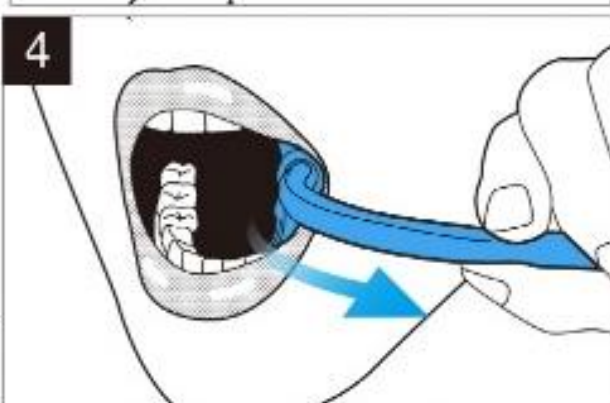

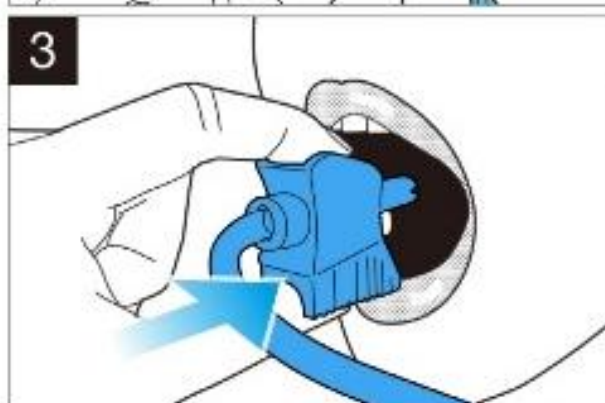

- ✗ Requires an Assistant
- ✗ Manual Suction Control
- ✗ Limited Visibility Due to Saliva & Fluids
- ✗ One Hand Occupied, Making Treatment Inconvenient
